

NPM TLS Error in Command Line

by Alexandra Kropova from Mammoth Interactive

Originally at <https://mammothinteractive.com/how-to-fix-npm-tls-error-in-terminal>

Are you seeing this message in your Terminal (Command Line) application when using npm?

*Remove warning 'Beginning October 4, 2021, all connections to the npm registry - including for package installation - must use TLS 1.2 or higher. You are currently using plaintext http to connect. Please visit the GitHub blog for more information:
<https://github.blog/2021-08-23-npm-registry-deprecating-tls-1-0-tls-1-1/>'*

Solution

Enter the following in your Terminal:

```
npm config set registry https://registry.npmjs.org/
```

Some computers are still running with `http://registry.npmjs.org`, which is not going to be allowed anymore for security reasons.
